

D1R/D1S HID Ballast Replacement by CARHIDKITS.com

If your vehicles factory D1S or D1R ballast has stopped working, replacing it with our aftermarket D1 ballast is an economical solution. Our ballast is not an OEM ballast, but uses the same components inside. Our ballasts shape and size will be different. This means you will have to mount it in a different spot or make the original spot fit to hold this ballast.

Below pictures shows how a ballast is wired up. You will have input from the car (providing the power to turn it on) and output to the back of the D1 bulb.

Remember the plug that went into your original OEM ballast will be different than the plug on our D1 ballast. This is why we state you must cut the input wire from your cars wiring. Example below is

The plug from our D1 ballast will go to your D1 bulb as shown below.
